

NorayBio takes part in the European Project NANODETECT

NANODETECT Project (Development for nanosensors for the detection of quality parameters along the food chain) will develop the technology necessary to improve quality control systems within the European dairy industry.

NorayBio will be responsible of the development of the bioinformatics tool for the analysis of the data obtained from the nanodetector and of the decision-making based on the defined analysis parameters.

The projects, financed by the European Union inside Frame Programme VII, will be carried out by 5 countries: Estonia, Germany, Netherlands, Spain, and United Kingdom. It started on the 1st of September 2008 and it will take place during the following 36 months.
