Integration brand

What's ServiLIMS?

Software for the management of scientific and technical services of universities and research centres.

ServiLIMS enables both management and web-communication among researchers, service providers and centre administration. ServiLIMS can be adapted to the requirement of the customer by means of the creation and addition of new features.

WEB PART

1 Public Part

- Home page
- Offered services
- Presentation and contact

2 Private - Login required

- Service request forms
- Request traceability
- See the results

LOCAL PART

3 Specific modules

- Request Management
- Results Management
- Invoicing module
- Material storage

General modules

- Statistics and reports
- User management
- Quality-Change control
- Configuration

ServiLIMS has 3 main parts:

1. Public Web Part: a web portal to show the group description, offered services, price list, etc.
2. Private Web Part: logged users will be able to access here to fill request forms, to trace request state and to see result files.
3. Local Part: software for service managers, to manage requests, register obtained results and create invoice orders.

Advantages

- NorayBio is the first Spanish bioinformatics company and we are specialized in the design and development of software for Biosciences, with high knowledge in LIMS.
- NorayLIMS enables to create a complete central management system as a base to support, in the future, the complete integration of new processes and activities or software.
- NorayBio offers the possibility of developing tailored projects so that the customer can have his own completely customized software.
- Sample traceability maintenance.
- Central and standard information management.
- User-friendly software.
