Ongoing communication with the researcher.

Approval management.

Sample preparation.

Documantation and information for the researcher.

Closing of the request

The biobank and the researcher close the request.

Evaluation of the level of service provided.

Our strengths

Accessibility
Catalogue with public access and registration/management of sample requests with private access.

Security
Independent and isolated database in which only the information of the collection to be published is collected.

Customisation
It allows configuring the information on the collections and samples to be published, as well as the documentation that the scientific community must provide when requesting samples.

Interoperability
Integrable with your biobank/institution's sample management software, allowing automatic catalogue updates.
