What tasks does AniBio allow to run?

AniBio is an easy-to-use software solution designed to **improve the management** of the animal facility and the animals, facilitating the tasks and daily activities of each user and ensuring the traceability of the data.

Besides, AniBio provides users with the creation of the statistical tables required by EU members, and other reports depending on the country.

Animals:

Animal file or passport

All information associated with an animal centralised in a document. Characteristics, location log, services and associated procedures...

Traceability

Generate a unique and automatic code that allows you to trace all the information associated with the animal, as well as the changes made audit trail allowing multicriteria searches in an agile and simple way.

Breeding and reproduction

Manage all tasks from the same screen. Select animals individually or in block. Consult and export productivity statistics.

Transgenic lines and genotyping

Register and associate your transgenic lines, genes and genotypes to a group of animals in just a few seconds.

Cryopreservation and reproduction

Store samples of sperm, ovules, embryos and other types of samples and manage your IVF and revitalization processes.

Veterinary treatments and drugs

Record clinical examinations and manage the treatments and medicines provided to your animals.

Experimental activity

Record the experimental activity in your animals.

Facility:

Virtual structure of the animal facility

Graphic representation of racks, rooms and areas of the animal facility in AniBio.

Room and equipment review

Record the values associated with the room (humidity, temperature ...) and configure the reviews to be made for the maintenance of the equipment.

Incidents

Associate incidences with an animal or a group of animals and inform the users via e-mail.

Room and equipment booking

Book the rooms and bookable elements and manage the schedules available for the requests of the users.

Stock control

Manage consumables and drugs. AniBio will notify you with alerts when you have reached the minimum stock or it is about to expire.

Storage management

Configuration of virtual storage and allocation of samples. Different colours can be assigned for a quick visualisation.

2

AniBio is an easy-to-use software developed with the aim of integrating all the profiles involved in an animal facility.

Likewise, users can adapt the software to their daily activity, and develop their tasks in AniBio in an intuitive way thanks to the possibility of customising their interface individually.

Advantages AniBio offers you:

Animal facility Manager

Effective management of the animal facility in a fully centralised and standardised way

Organisation and administration of:

- Animal facility activities
- Users and competences
- Resources

Centralised communication with other profiles:

- Export data and create personalised reports
- Requests management

Monitoring of:

- Animals
- Processes
- Facilities
- Users
- Projects and procedures

Legislation y reporting:

- AniBio assists users in the generation of the reports required by the legislation

Veterinarians

Plan and monitor activities related to animal welfare

- Associated clinical exams and treatments
- Generation of incidents and veterinary follow-up
- Health controls
- Drug registration

Researchers

Communicate directly with the animal facility through AniBio

- Requests: animals and services
- Consultation and management of animals and procedures
- Guaranteed confidentiality
- Animal genotyping

Technicians:

Optimise daily activities through automatic alerts

- Births, weaning and genotyping
- Services and orders of animals
- Stock of consumables and drugs

Visualise and manage the location of the animals in an agile and intuitive way

- Drag & drop system for both cages and animals
- Automatic location
- Overview of the rack by level of occupation and purpose
- Design and printing of labels from AniBio

Financial management:

Control the invoicing and expenses associated with a research project

- Invoicing per procedure or responsible of payment
- Generation and assignment of tariffs
- Automatic cost control
- Invoice delivery from AniBio

Build your AniBio:

AniBio offers 3 editions to adapt the software to the needs of each animal facility, so that each centre can have an AniBio according to its activity and structure.

AniBio Premium

The most complete edition of AniBio. Access to all available modules (cryopreservation, drug management...) for an optimal and efficient management of the animal facility.

Includes all the modules

AniBio Advanced

For those who need extra functionalities (services, financial management...) and want to use web tools to communicate with researchers.

Possibility of additional modules

AniBio Basic

For those in search of a professional tool for the management of their animal facility.

AniBio PLAT

AniBio PLAT is a complementary edition for complex platforms composed of "x" animal facilities that require cooperation and global management. Any edition of AniBio can be applied to a platform.

4

Type of access:

AniBio Web Based

Run AniBio on any device (Mac, PC, tablet, iPad or smartphone) from any browser. There is no need to pre-install on each device.

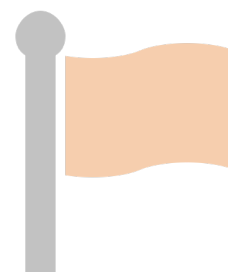

AniBio Desktop

If you do not need web access, you can access the classic AniBio by installing it on your device. Our technical department will facilitate the installation.

Did you know...?

AniBio generates a system of automatic alerts which will avoid errors in the daily activity of the animal facility, optimising the time of each user.

In addition, AniBio allows you to have full control of the animal traceability recorded in the file of each animal thanks to the automated data recording system .

Technical support and additional services:

5

Our clients highlight our personalised support from the moment of the purchase as one of our strengths.

We also offer various additional services that can be purchased together with the software license or afterwards.

Technical support

- Personalised support in different languages
- Track the status of your query
- Continuous evolution of AniBio

Additional services

- Data migration
- Implantation project
- Integration with other systems
- Extra training
- Consultancy
